

ENERGY Shelter™ - A tailor-made tent in fire resistant material for use on scaffolding frames

Compatible with most scaffolding systems. ENERGY Shelter™ can be used in need of a limited area protected from weather and wind, or to protect the environment for operations taking place inside ENERGY Shelter™, like sand blasting. Suitable for both oil, gas and construction.

ENERGY Shelter™ is made of material which reduces noise. It holds both dry and clean working conditions and is suitable for storage of measurable instruments, tools and parts. Can be delivered with window, floor and ventilation, and it's possible to have the work bench close to working place.

Advantages with ENERGY Shelter™

- Time saving – easy to assemble/disassemble
- Low weight – can replace containers in many cases
- Durable and fire resistant material
- Clean working environment
- Recycled - no waste
- Available in different sizes
- Short delivery time
